# N70

N70/4    N70/5    N70/6,5

N70/4    N70/5    N70/6,5

## THE N70 RANGE

A range that combines price, aesthetics and ecology.

In addition to N70/4 (±240x70x40 mm) & N70/5 (±240x70x50 mm) the N70/6,5 (±240x70x65 mm) is new to the list.

**Nelissen Bricks' N70 range is an ecological range that combines price, aesthetics and ecology.**

The three formats within the series - N70/4, N70/5 & N70/6,5 - each have a unique format that offers numerous benefits. For example, the N70 series reduces CO<sub>2</sub> emissions during the production process. Thanks to its slim shape, transportation is also more CO<sub>2</sub>-friendly and reduces the mortar required by about 30%. The result? An aesthetic facade with ecological benefits.

**BUILDING AESTHETICALLY  
AND ECOLOGICALLY**

# Benefits

## EXCLUSIVE FORMAT

The facing bricks in the N70 series feature an exclusive facing brick format: ±240x70x40 mm (N70/4), ±240x70x50 mm (N70/5) and ±240x70x65 mm (N70/6,5). The special dimensions are a small change with a world of difference, allowing you to enjoy many benefits in your construction project.

## LOWER COST

A notable and important plus point of the N70 bricks is the advantageous price. N70/4, N70/5 and N70/6,5 are all cheaper per m<sup>2</sup> compared to their traditional counterparts. N70/6,5 is at least 10% cheaper.

## OPTIMAL TRANSPORT

Due to its slim shape (the N70 series is only 7cm deep), N70 bricks weigh less than traditional facing bricks. So the weight per m<sup>2</sup> on the truck is also lower. This allows more facing bricks to be transported at once and ultimately makes the transport more CO<sub>2</sub>-friendly.

## FAST PROCESSING

N70 is also a favourable choice in the processing stage. The narrow model ensures that less mortar is needed compared to using traditionally sized bricks. With the N70 formats, you use fewer bricks and less mortar per m<sup>2</sup>.

## LOWER ENERGY BILL

With the thinner N70 formats, you get benefits at purchase, processing and usage. The less deep size of the brick offers two options: more interior space or better insulation. By using extra insulation, you will save on energy costs in the long run.

## AESTHETIC VERSATILITY

The N70 series offers something for everyone. For a sleek and modern facade, there is a choice of N70/4 and N70/5. In turn, the fuller format N70/6,5 retains the flexibility to be processed in a more traditional way. From the available colour palette, you can effortlessly choose the perfect look for any construction project!

# Focus on dematerialisation

Nelissen Bricks is committed to reducing energy and raw material consumption without compromising on quality and functionality. The N70 range is already a fine outcome of this thought process and fits perfectly within the dematerialisation framework to which the entire brick sector in Belgium is committed.

	N70/4 vs. RF 4	N70/5 vs. WV 50	N70/6,5 vs. WV 65
<b>Format</b>	±240x70x40 mm	±240x70x50 mm	±240x70x65 mm
<b>Cost</b>	At least -6,5% per m <sup>2</sup>	At least -13% per m <sup>2</sup>	At least -10% per m <sup>2</sup>
<b>Transportation</b> <small>(pieces, not m<sup>2</sup>)</small>	+16,6%	+13,6%	+14,5%
<b>Mortar savings</b>	-30%	-30%	-30%
<b>Weight per piece</b>	-11,5%	-12,5%	-14,5%
